

Berea Hardwoods Co., Inc.
Kit Instructions

Berea Hardwoods Damascus Steel Folding Knife (Berea #8809)

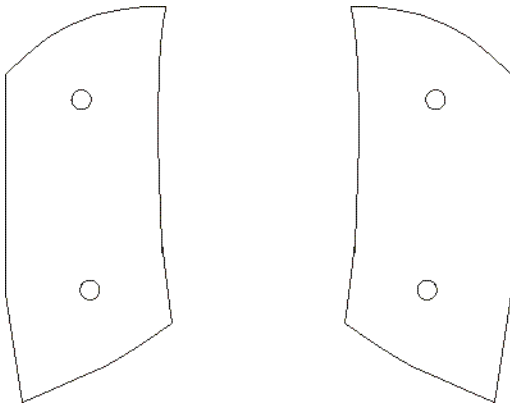

Needed: Mandrel-None
Bushings-None
Drill-1/8" & 5/32"
Material Size- 2 1/4" x 1 1/4" x 1/4"

Preparing the Material Blank and Making the Knife

1. Cut the material blank. You will need 2 of these.
2. Using the pattern below as a REFERENCE ONLY, saw out your blanks slightly larger than the pattern.
3. Carefully sand, file, or saw the blank until it fits the cavity in the knife.
4. Now, using the template again drill the holes for the screws. I used a 3/32" bit to drill the initial hole and then tried it on the blank to make sure the holes were in the right place.
5. Once they are adjusted properly drill through the blanks with the 1/8" drill.
6. Making sure you have the blanks oriented properly, left blank on the left and right on the right, drill a shallow step or counter sink slightly into the blank.
7. Try the screw to make sure it is flush with the surface or slightly lower.
8. Continue drilling until the screws fit properly.
9. Taper, round, and texture your blank as you desire.
10. Sand and polish the blank to your satisfaction.
11. Finish the blank in your choice of finish.
12. Attach each blank to its respective side using the screws and wrench provided.
13. Now, decide how much you're going to charge for the GORGEOUS knife.
